One street. Two roles. A world that changes live.

The planned 5-minute demo, from picking up a controller to the next visitor.

1 PC | 2 monitors | 2 controllers | Player = left screen / pad 1 | Brand = right screen / pad 2

BEFORE THE TOUR — Idle street: built-in house campaigns compete every 2 minutes; buildings change. Pick up a controller to begin.

ACT / START	PLAYER / WHAT THEY DO & SEE	BRAND / WHAT THEY CONTROL	VISIBLE RESULT
1 — 0:00 **Arrive**	**Pick a profile. Explore the street.** The returning profile already owns and wears a jacket.	**Show Player B beside the portal.** A different profile and low-spec setting receive a different Lane stall and lighter content.	**Same street. Different experience.**
2 — 0:30 **Be the brand**	**Explore while the Brand sets up.** The Corner slot starts as the house ramen shop.	**Set up a campaign and submit.** Package → fit → rating → sign → auction. The default bid wins.	**The campaign wins a place in the world.**
3 — 1:30 **It appears**	**Walk toward the Corner slot.** Content downloads and is checked. The new building appears; walk in and interact.	**Watch campaign activity arrive live.** Views, time inside and spend begin updating.	**New content arrives without a loading screen.**
4 — 2:30 **Shop**	**Visit the Plaza clothing store.** Try on, then buy with demo credits. A redeemed digital item stays owned.	**Change a price; watch the funnel.** Seen → tried → bought. A physical item produces a mock order reference and QR.	**Try-on is temporary. A purchase is owned.**
5 — 3:45 **The live update**	**Collect 3 of 5 tokens in the Brand building.** Stay inside for the update, then exit and re-enter. Progress is still 3 of 5; the jacket stays on.	**Push the Season 2 update.** The update waits while the Player is inside, then swaps when they leave.	**The building changes. Progress survives.**
6 — 4:45 **Budget out**	**Watch the house campaign return.** If still inside, the handback waits until the Player leaves.	**Campaign credits reach zero.** The slot is re-auctioned; the house wins it back. Show the campaign summary.	**The campaign ends. The game keeps running.**

RESET → ATTRACT → NEXT VISITOR — Visitor campaign and progress clear. The running game returns to the idle street.

ALL TOUR LONG — **Build number • uptime • restarts: 0 • loading screens: 0**

90-SECOND EXPRESS — Act 2 on defaults (three button presses) → Act 3: approach, watch it appear, enter.

What makes the demo convincing

Three simple cause-and-effect sequences to explain while the visitor plays.

01 Publish → appear

Act 2 → Act 3

Submit	→	Check & allocate	→	Player approaches	→	Load safely	→	Enter & interact
Pick a ready-made building and campaign settings.		Validate and sign; win the auction for a slot.		The game looks up the winning content.		Download → verify → mount into the game.		The building appears. Live campaign stats update.

On-screen proof Resolving → downloading → verifying → mounting → active. Re-publish the same building: cache hit.

02 Update the building. Keep the progress.

Act 5 / headline moment

Play Season 1	→	Brand pushes S2	→	Player exits	→	Season 2 appears	→	Player re-enters
Inside the building, collect 3 of 5 tokens.		The update is queued. The Player keeps playing.		Save progress and release the old building.		Load the new version and restore saved progress.		Still 3 of 5 tokens. Purchased jacket still owned.

On-screen proof “Swap pending” while occupied → swap after exit → matching progress before and after.

03 Try it. Buy it. Keep it.

Act 4 / simulated store

Try on	→	Choose to buy	→	Receive receipt	→	Redeem	→	Get the item
Temporary preview; leaving removes it.		Pay with demo credits in the simulated store.		The store returns a signed demo receipt.		Server verifies the receipt and records ownership.		Digital: permanent item. Physical: mock ref + QR.

On-screen proof Seen → tried → bought. The returning profile starts with a pre-seeded jacket to show ownership across sessions.

OPTIONAL DETOURS Use only when a visitor asks

Invalid content

Too tall or wrong age rating → reject with a reason.

Low bid

House wins → the ramen shop stays in place.

Download problem

Corrupt: placeholder + retry. Paused: resume download.

DEMO BOUNDARY Prebuilt content • automatic checks • demo credits • mock fulfilment • local PC backend by default
